

Wasserverband Knoblauchsland (Knoblauchsland water association) in the Nuremberg / Fürth district, Germany

Services provided

Inventory for the irrigation system and planning of compensating measures

Technical details

The Wasserverband Knoblauchsland (Knoblauchsland water association) supplies approx. 1.8 million litres of water per year for the purpose of irrigating approx. 830 ha of market gardening areas. On account of construction work on the Nuremberg-Ebensfeld railway line, which crosses the association's land, it was necessary to plan compensating measures and integrate these into the overall system.
