

Drainage Engineering for Development of Brasseur Barracks, Cologne, Germany

Project period
2004 - 2013

Services provided

Overall planning, assessment of sewer condition in accordance with ATV-M149, hydro-dynamic calculation of sewer network

Technical details

The grounds of the former Brasseur barracks are to be developed in accordance with the new development and utilisation concept for the establishment of an industrial estate. Extensive sewer construction works are required, carried out in cut-&-cover and underground tunnel driving technique.
