

# CONVERSION OF BERLIN OSTKREUZ STATION

© Nürnberg Luftbild, Hajo Dietz

**Overall Project Award**  
Package 12, Germany

**Project period**  
2013 - 2020

## **Services provided**

Project planning engineering structures and traffic facilities, structural design technical equipment and building: approval and execution planning

## **Technical details**

The Ostkreuz railway station is one of the most heavily frequented interchange points in the Berlin public transport network. In future, the Ostkreuz railway station will not only be the halt for rapid transit lines, but also for regional trains from all directions. The overall conversion is being carried out under continuing operation. The design contract included various bridges, railway arches, noise protection and retaining walls as well as traffic facilities.
